The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/550,660

Applicant(s)

SUZUKI ET AL.

Examiner

SAHAR A. BAIG

Art Unit

2424

Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 11 June 2008.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-5, 7-16 and 18-26 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-5, 7-16 and 18-26 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/S5108)
Paper No(s)/Mail Date 05/21/2008
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-5, 7-16, and 18-26 have been considered but are moot in view of the new ground(s) of rejection. The newly added limitations are met by Chan US Patent Publication No. 2003/0159143.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 1, 2, 3, 8, 23, and 24 rejected under 35 U.S.C. 103(a) as being unpatentable over Whitehead US Patent Publication No. 2002/0040476 in view of Chan US Patent Publication No. 2003/0159143.

Regarding Claim 1, 2, 8, and 23, Whitehead discloses an information processing device for displaying an electronic program guide [0001], comprising: a program information storage unit storing one or more pieces of program information as information about programs for composing an electronic program guide [0008 lines 1-5]; a moving picture storage unit storing one or more moving pictures for identifying the program information; and a program guide display unit for

displaying an electronic program guide including moving pictures **[0008 lines 5-11]**.

However, Whitehead fails to explicitly teach of a device wherein the program guide display unit displays a moving picture for identifying a program by changing the size of the program depending on the output duration of the program. This is a common property of any electronic program guide available in the industry. The time slots are assigned to each program based on their duration. To have the video segment time slot also allotted to each program based on duration would have been obvious to one of ordinary skill in the art. Therefore at the time the invention was made this technique would have easily benefited the consumers in quickly deciding what they should expect to see on a given channel at a certain time.

Whitehead also fails to teach the claimed feature of simultaneously displaying a plurality of moving picture programs. In an analogous art, Chan discloses this feature in **Figure 6 [EPG is shown where the broadcasted videos from different channels is displayed on a single screen]**. Therefore it would have been obvious to one of ordinary skill in the art to combine the teachings of Chan and Whitehead to devise an electronic program guide capable for displaying a mosaic of videos on a single EPG screen.

Regarding Claim 3, 6, 24, Whitehead discloses an information processing device **[0013]** for displaying an electronic program guide having one or more pieces of program information having a program identifier as information for identifying a program and range of time information as information showing an on-air range of time of the program **[0014]**, comprising: a program information storage unit storing one or more pieces of program information **[0018 line11-13]**; and a program information display unit for displaying one or more pieces of program information out of the program information stored in the program information storage unit **[television displaying the EPG]**.

Whitehead again fails to show that the program information display unit determines the size of display frame of one or more pieces of program information to be displayed, on the basis of one or more pieces of range of time information possessed by one or more pieces of program information to be displayed, out of one or more pieces of program information stored in the program information storage unit. Assigning time slots to each program in the EPG grid based on its duration is well known in the art. Therefore, at the time of the invention the inclusion of such a feature would have been apparent to one of ordinary skill for the benefit of quickly displaying television program related trailers.

1. Claim 4, 5, 7, 9-16, 18-22, 25, 26 rejected under 35 U.S.C. 103(a) as being unpatentable over Whitehead US Patent Publication No. 2002/0040476, in view of Chan

US Patent Publication No. 2003/0159143 in further view of Matthews, III US Patent No. 5,815,145.

Regarding Claim 4, 5, 13-16, 18, 25 and 26, all of the disclosed limitations are shown above in Claim 3 except encompassing an input accepting unit for accepting an input of instruction of program information to be focused out of one or more programs displayed by the program information display unit.

In an analogous art, Matthew discloses an EPG in FIG. 4 showing a Video program guide 100 displaying for a viewer multiple video programming tiles 102 corresponding to programming available on selected channels during a programming schedule period. At least one of the video programming tiles 102a includes a multi-frame video segment 104a relating to programming available on a corresponding one of the selected channels. It would have been obvious to one of ordinary skill to adjust the display frame on the basis of the time slot of the program since it is well known in the art to have EPG time slots assigned to programs based on their duration.

Regarding Claim 7, 11, 21, Whitehead discloses an information processing device for displaying an electronic program guide **Figure 2** having one or more pieces of program information including a moving program identifier **16**, range of time information [*Time axis of the grid*], and a moving picture [*Video clip being shown*]. However White head fails to teach that the moving picture possessed by

the program information is displayed by changing the display method of moving picture on the basis of the range of time information.

In an analogous art, Matthews shows in **Figure 4** that the different cells of the EPG can all have a video simultaneously displayed. Therefore it would have been obvious to one of ordinary skill in the art to combine the teachings of Matthews and Whitehead to produce an EPG capable of displaying video trailers of programs.

Regarding Claim 9 and 19, Matthews discloses that the display method of moving picture is moving picture reproduction, display of still picture contained in the moving picture, or frame feed reproduction of the moving picture **Figure 5 step 134**.

Regarding Claim 10 and 20, although it is not explicitly disclosed in either Whitehead, Chan or Matthews that the moving picture is displayed by changing the reproduction speed on the basis of the range of time information, it is obvious that the reproduction speed depends on the duration of the program. A shorter program will have shorter number of scenes to be shown as trailers whereas a longer program will have a lot more scenes to be shown for trailers. Hence the reproduction speed will depend on the entirety of the trailer. The longer the trailer

the slower the reproduction speed will be. Therefore it would have been obvious to one of ordinary skill in the art to include this feature.

Regarding Claim 12 and 22, Matthews discloses the representative still picture as still picture representing the moving picture holds a representative identifier in pair as information for identifying the pertinent representative still picture [*Figure 5 step 126 Select Focused Video Program Tile*], and the still picture is displayed as display of still picture identified by the representative identifier [*Figure 5 Step 128 Retrieve Display Imagery*].

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to SAHAR A. BAIG whose telephone number is (571)270-3005. The examiner can normally be reached on 4/5/9.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chris Kelley can be reached on 571-272-7331. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
